

## Reception Forest School Session 6 23.10.19

Today we began by thinking about our super investigating with floating and sinking last week. However we very soon got distracted by the wonderful spider's webs with dew on them. They looked so magical and we thought some of them looked like they had jewels on them. The children noticed webs going between the trees and were curious as to how they got between the branches. Some children wanted to make their own webs, so we made a frame and the children wound round thread to look like a web. We also investigated what happened when we added different items to water. Did they disappear? Did they change the water? Could they still be seen? The children had great fun mixing and talked about what was happening.
