

## Year 2 Forest School Session 1 26.2.2020

Today the children explored different animal habitats. Some children broke up small sticks into bundles to add to the bug hotel. Some children helped to plant some potatoes. Some children explored making large and small habitats for animals. Others dug a lake with an estuary and tested the water flow, then added a bridge. A couple of children used logs and other items to make a cement mixer then used a piece of bark to get the cement nice and smooth.
