Sickness Guidance

Not every illness needs to keep your child from school. If you keep your child away from school, be sure to inform the school on the first day of their absence. Please call school's absence line (Option 1) before 8.45am and leave your child's full name, class and why they are off.

Use common sense when deciding whether or not your child is too ill to attend school.

Ask yourself the following questions:

- Is my child well enough to do the activities of the school day? If not, keep your child at home.
- Does my child have a condition that could be passed on to other children or school staff? If so, keep your child at home.
- Would I take a day off work if I had this condition? If so, keep your child at home.

Common conditions

If your child is ill, it's likely to be due to one of a few minor health conditions.

Whether you send your child to school will depend on how severe you think the illness is. Use this guidance to help you make that judgement. Remember: if you're concerned about your child's health, consult a health professional.

- **COVID-19. Continuous cough, temperature or loss of sense of taste or smell.** Child is to be kept off school and take a COVID test. If test is negative child can return to school when better. If positive, child must stay at home for 10 days from onset of symptoms. Keep school informed of test results as soon as these are known.
- **Cough and cold.** A child with a minor cough (not continuous) or cold may attend school. If the cold is accompanied by a raised temperature, shivers or drowsiness, the child should stay off school, visit the GP and return to school 24 hours after they start to feel better. If your child has a more severe and long-lasting cough, consult your GP. They can give guidance on whether your child should stay off school.
- **Raised temperature.** If your child has a raised temperature, they shouldn't attend school. See COVID-19 procedure.
- **Rash.** Skin rashes can be the first sign of many infectious illnesses, such as chickenpox and measles. Children with these conditions shouldn't attend school. If your child has a rash, check with your GP or practice nurse before sending them to school.
- **Headache.** A child with a minor headache doesn't usually need to be kept off school. If the headache is more severe or is accompanied by other symptoms, such as raised temperature or drowsiness, then keep the child off school and consult your GP.

- **Vomiting and diarrhoea.** A child with vomiting and/ or diarrhoea should definitely be kept off school for **at least 48 hours** from the last episode of vomiting and/or diarrhoea. Most cases of vomiting and diarrhoea in children get better without treatment, but if symptoms persist, consult your GP.
- **Sore throat.** A sore throat alone doesn't have to keep a child from school. But if it is accompanied by a raised temperature, your child should stay at home - see COVID-19 procedure.
- **Impetigo.** If your child has this they are only to return to school once the lesions are crusted and healed, or 48 hours after commencing antibiotic treatment.
- **Chickenpox.** A child is to be kept off school until all spots have dried up and scabbed over.
- **Measles.** A child is to be kept off school for four days from onset of the rash.

This list is not exhaustive.

Tell the school

It's important to inform the school if your child is going to be absent. On the first day of your child's illness, telephone the school to tell them that your child will be staying at home and what their illness is, i.e. sick, temperature, diarrhoea.

If it becomes clear that your child will be away for longer than the guidelines listed above, phone the school as soon as possible to explain this.
